**Life can no longer be the same; Devialet® D-Premier invites you to explore a world of unsuspected pleasures...*

—

The unique performances of the Devialet® D-Premier reveals all the richness, relief, timbers' beauty and subtleties of your favorite musical works like never before.

Technology vanishes behind the music. For the very first time, you gain access to the genuineness of the original sound takes, as though you were attending the recording sessions that immortalized those magical instants.

Believe in yourself! You will know the difference. This sensibility lies in everyone of us.

TECHNOLOGY-BASED INNOVATION

Stemming from 4 years of uncompromised R&D, the Devialet® D-Premier is the first device equipped with the ADH® core (Analog Digital Hybrid): a breakthrough innovation, patented by Devialet®, working with 2 analog amplifiers - pure class A accuracy and musicality - supported by 8 digital power amplifiers.

Thanks to this combination, the D-Premier sets new standards in all measurable performances.

Designed for the digital era, the D-Premier expresses Devialet®'s will to surpass existing concepts through innovative technology. Including the best Digital-to-Analog Converter on the market, it will bring out the best from all your digital sources, such as computers, music servers or AirPort® bases.

FREE YOUR SPACE

Devialet® conceived a brand new architecture. D-Premier comes in a luxurious, carved out and polished aluminum block, only 32 mm high. You can place it horizontally, or hang it on the wall in a vertical position. This way, it will blend into your interior design. A removable cover hides all the inputs, allowing a discrete installation.

The control buttons are removed from the amplifier and placed on a dedicated radio-linked remote device, so you can enjoy and control your music while comfortably installed at a distance.

D-PREMIER BY DEVIALET®

AUDIOPHILE INTEGRATED AMPLIFIER

POWERFUL

Devialet® D-Premier is a 2x240W stereo amplifier, which ensures a great compatibility with a wide range of loudspeakers (8 to 2Ω). Power consumption is highly reduced compared with traditional amplifiers: efficiency exceeds 85%, since most of the power is provided by the digital amplifiers inside the ADH® core.

INTEGRATED

Devialet® D-Premier gives a simple and comprehensive response for the use of digital music. No additional equipment is required. A preamplifier suited to each input, analog or digital, is included, as well as the best D/A converter on the market, designed by Devialet®, and located in the core of the amplifier. By shortening the signal processing chain, it avoids losses due to connections. Just plug your CD player or driver into a digital input, your computer or Airport® base, and enjoy right away your Devialet® D-Premier.

HIGH PERFORMANCE

Under real use conditions, Devialet® D-Premier offers the lowest signal distortion on the market, the best signal-to-noise ratio, the lowest intermodulation, the lowest output impedance, etc. (see opposite). In short, it remains true to the musical recordings, reveals all of its complexities, avoids signal parasiting and drives the loudspeakers perfectly. Devialet® D-Premier unveils the music, and gives access to all the subtleties of the original recordings.

RAPIDLY AVAILABLE

No warming up required, Devialet® D-Premier is fully operational in less than 10 seconds.

COMPATIBLE

Devialet® D-Premier accepts all kinds of audio sources, analog (including turntable), and digital (optical, XLR, or coaxial). Equipped with an HDMI input & output, you can use it with your home theater or HD TV. You can also use a subwoofer, in 2.1 mode, and run multi amplified audio systems.

EASY

Only the power button remains on the appliance, all the other controls are placed on the handy remote device, highly sensitive and simple. All the information is displayed on a high definition control screen, which adapts itself to the brightness of the room and to the position of the amplifier (horizontal or vertical).

UP TO DATE

If you wish to, you can easily configure and update the inputs setup and remote control buttons through a web interface, downloaded via SD Card (provided).

RELIABLE

The careful design of the electronic circuits, which comprise 2,500 components, ensures a steady performance level. As it is fully assembled onto circuit boards, without a single welded wire, Devialet® D-Premier is highly reliable.
